

PREDICTED QUESTION PAPER

AI-Generated Exam Paper | February 24, 2026

Instructions:

- This paper is generated based on analysis of multiple previous year question papers.
- Section C contains the most important questions (highest priority).
- Focus your preparation on Section C first, then Section B, then Section A.
- Time management is crucial during the actual exam.

SECTION C — Long Answer Questions

(Answer any THREE questions. Each question carries 10 marks.)

1. Attempt any THREE of the following : 12 a) Define variable. State the rules for naming of variables. b) Write a program to accept 10 numbers in array and print sum of it. c) Write a program to find area of circle using function. d) Explain following string handling functions with syntax and example. i) Strcmp() ii) Strrev() e) Explain the use of '*' and '&' operator with example. --- Page 3 --- 312303 [3] Marks

2. Attempt any THREE of the following : 12 a) Explain the printf() and scanf() statement with syntax and example. b) Write a program to take input as a number and print its reverse number. c) Write a program using structure to print data of 5 students having data members name, class and percentage. d) Explain how to pass pointer to function with example.

3. Attempt any FIVE of the following : 10 a) List the data types used in C. b) Write the syntax of else - if ladder c) State the use of break and continue statement. d) Define Array. Write the declaration of two dimensional array. e) State the use of getchar() and putchar() function. f) Write any two advantages of pointer. g) Define structure with example. P.T.O. --- Page 2 --- 312303 [2] Marks

SECTION B — Medium Answer Questions

(Answer any FIVE questions. Each question carries 6 marks.)

1. Attempt any THREE of the following : 12 a) Draw and explain general structure of C program. b) Write a program to accept the value of year as input from keyboard and print whether it is leap year or not. c) Differentiate between character array and integer array with respect to size and initialization. d) Write a program to swap the values of variable a = 20, b = 30 using function.

2. Attempt any TWO of the following : 12 a) Explain any 3 arithmetic operators and bitwise operators used in 'C' with an example. b) Write a program to print the grades of student according to percentage of marks using nested if ----- else statement. Per - marks Grade 80 – 100 Distinction 60 – 79 First Class 50 – 59 Second Class 0 – 49 Fail c) Write a program to print addition of two 3 × 3 matrices.

3. Attempt any TWO of the following : 12 a) Describe switch case statement with syntax and example. b) Explain function declaration, function definition and function call with the help of example. c) Write a program to accept two numbers from user and perform addition subtraction, multiplication and division operation using pointer.

4. Attempt any TWO of the following : 12 a) Write a program using for loop to print * * * * * b) Define structure. Give its features. Explain how it can be declared and initialized. Explain Type def and enum. c) Write a program to find factorial of n numbers using function.

5. Attempt any THREE of the following : 12 a) Write a program to declare structure employee having data members name, age, street and city. Accept data for two employees and display it. b) Differentiate between while and do while loop. (Write four points) c) Write algorithm and draw flowchart for finding largest number among three numbers. d) Explain recursion with example.

SECTION A — Short Answer Questions

(Answer any FIVE questions. Each question carries 4 marks.)

1. Attempt any FIVE of the following : 10 a) Write the syntax of do while loop. b) Define token and identifier. c) Define array and Give its two characteristics. d) Explain '*' and '&' operators used in pointer. e) Write the syntax and use sqrt() function of header file. f) List any four relational operators. g) Draw and label different symbols used in flowchart. P.T.O. --- Page 2 --- 312303 [2] Marks

2. Attempt any THREE of the following : 12 a) Explain strlen () and strcat () string handling function from standard library. b) Define pointer. How to declare and initialize pointer ? c) Explain arithmetic and shift operators with example. d) Explain declaration

and initialization of one dimensional array using example.

3. b) Explain `getchar ( )`, `putchar ( )`, `malloc ( )`, `calloc ( )` functions. c) Write a program to accept two integer from user and perform addition, subtraction, multiplication and division operations using pointer. d) Give any four difference between call by value and call by address. e) Draw the flowchart for checking given number is divisible by 5 or not. --- Page 3 --- 312303 [3] Marks

4. b) Write a program to print values of variables and their addresses. c) Write a program to sort elements of an array in ascending order.

5. Attempt any TWO of the following : 12 a) Write a program to print fibonacci series starting from 0 to
